

## **Lautan Bumimas Sdn Bhd**

Lautan Bumimas Sdn Bhd, a subsidiary company under Goldis Berhad is into sustainable aquaculture. Its technological expertise and Research and Development capabilities is in the production and grow out of Giant Tiger Grouper Fingerlings for the local market and eventually for the export market. We provide high quality, chemical free live fingerlings to the Malaysian Fishery market.

There is a big demand for Giant Tiger Grouper fingerlings from the Malaysian Sea Cage Farmers, yearly estimated at over 8.0 million tails. These Grouper fish in turn, when fully grown to market sizes are exported mainly to Hong Kong, Mainland China, Singapore and other countries. These fingerlings quantities have to be met by the local hatcheries providing better quality and higher survival rates. Presently this demand of fingerlings is met by imports from Indonesia.

The demand for fish protein is growing at an annual rate of over 15 percent according to reports given by the Food and Agricultural Organization (“FAO”) due to an ever increasing world population. Fishes grow faster based on feed conversion ratio (FCR of 1:1.5) as compared to animal protein which is much higher. The consumption pattern is naturally veered towards fish protein which is produced much more economically and cheaper.

G Fish (Asia) Sdn Bhd, a partner to Lautan Bumimas Sdn Bhd, specialises in managing and developing local and international markets. Both companies complement each other, creating a great synergy and working relationship.
